

Ceramic Bearing Concept

After the success of the **CT²** (Ceramic Teflon® Treatment) product line, **STRONGLIGHT** now introduces a whole new range of headsets, with amongst others the **Light'in** and **Raz « Gold »** models, fitted with high precision **ceramic** bearings (Ceramic Bearing Concept)...

With a surface hardness **3** times higher than the treated steel of a top of the line annular bearing, the decrease of the bearing's coefficient, high resistance to corrosion, the ceramic bearing remains a very high tech high-end part.

Precision, rolling resistance and noise reduction are only some of this concept's strong points, which will soon conquer its market.

High performance **ceramic bearing**
(« Gold » models)

Annular bearing
(« Ca » & O'Light models)

Monobloc Cup cartridge
(Raz « ST » model)
